Installation Instructions for NPR 638 Access Rail Wall Mount

**Step 1: Locate Studs and Screw in SU Mounts**
- SU Mounts to be positioned with teeth facing UP
- ALL FOUR screws to be drilled into the same stud
- Both SU Mounts to be measured with level device
- Confirm that screw heads are flush or recessed into countersink
  - Access Rail will not slide onto mounts if screws are sticking out into the space between teeth

**Step 2: Attach Access Rail**
- Mount the Access Rail onto the SU Mounts from the front, confirm that Access Rail teeth are interlocked with SU Mount teeth
- Slide the Access Rail so that the middle of the Rail is approximately located in the middle of the space between both SU Mounts

Step 3: Attach Thumb Screw Bracket
- Insert Thumb Screw into Corner Bracket from the bottom
- Position Oval Nut on top of the Thumb Screw, thread nut only a few revolutions so that nut stays on the top of Thumb Screw
- Line up top edge of Corner Bracket so that it contacts the bottom edge of the SU Mount
  - You will be able to feel the contact made between the two parts
- Carefully turn the thumb screw in the clockwise direction
- After several revolutions you will feel the Oval Nut begin to tighten against the bottom flange of the Access Rail
- If the Oval Nut slips then repeat this step until there is a secure fit and you can pull down on the Thumb Screw Bracket without it falling off

Assemble Thumb Screw Bracket

Tighten Thumb Screw, Ensure Contact with SU Mount
