**STEP 10: CABLE MANAGEMENT**

A. Route power and monitor cables through the flexible cable clips on the M10’s upper link (A).

**NOTE:** Leave enough slack in the cables to allow arms to rotate without difficulty.

B. Slide the plastic cover on the lower link upward until it disengages, then remove (B).

C. Route cables inside the lower link (C).

D. Place the plastic cover back onto the lower link and slide downward until it clicks into place (D).

**NOTE:** For dual-monitor applications, first route monitor cables through cable management clips (E), then refer to step A.

---

**STEP 11: ARM ADJUSTMENTS**

**WEIGHT ADJUSTMENT**

Your monitor should move up and down easily and should stay in place once adjusted. If it is difficult to adjust or moves without assistance, it is not properly counterbalanced. M10: Weight Range: 20-48 lbs.

Monitor should not exceed 48 lbs.

A. To Open the Cover (C) from the Upper Arm Link (A), Use your finger in the groove to lever the cover up and Rotate the Cover (C) to see the adjustable Screw (S).

B. Adjust the Screw (S) with 5mm hex key clockwise direction to increase load tension and ant clockwise to reduce load tension.

C. Tighten the Screw (S) to achieve the force needed to hold the monitor weight.

**NOTE:** Do not overtighten the screws as it can damage the screw head or threads.

D. Move the monitor around to ensure that movement is smooth and the arm functions as desired. If required, repeat steps A and B (in order) to adjust the force as needed.

E. Rotate the Cover (C) and press down until it snaps into the desired place.

---

**M10 INSTALLATION HARDWARE**

- 4 Standard VESA Bracket Screws
- 4 Extended VESA Bracket Screws
- 4 Plastic Spacers
- VESA BRACKET
- 5mm Hex Key
- 8mm Hex Key
- Bolt-Through Plate
- Bolt-Through Mount
- Crossbar Link Screws
- Crossbar Installation Hardware
- 3 Crossbar Link Screws
- Clamp Mount
- Sliding Desk Mount
- Bolt-Through Bolts
- Bolt-Through Plate
- Bolt-Through Screws

---

**STEP 1: ATTACH MOUNT TO WORK SURFACE**

**CLAMP MOUNT**

1A. For installation on open edge of work surface:
   i. Slide Mount (M) against work surface edge and fully tighten Clamp screws (D) with 5mm hex key (X).

   **NOTE:** If work surface is too thin to attach Mount at default setting, proceed to step 1B.

   ii. Proceed to Step 3.

1B. For installation on work surface positioned against a wall or panel:
   i. Detach the Bottom Clamp (A) from the Top Bracket (B) by loosening Bracket Screws (C) with 5mm hex key (X).
   ii. Position the Top Bracket against work surface edge and fully tighten Clamp screws (D) with 5mm hex key (X).
   iii. Underneath the work surface, reattach the Bottom Clamp to the Top Bracket (using the Bracket screws).

   **NOTE:** There are two sets of Bracket Screw holes to accommodate the thickness of every work surface. Use the set of holes that allow the Clamp Screws to tighten fully. Use the top holes for surfaces up to 1.6" (41mm) thick and lower holes for surfaces up to 2.7" (68mm) thick.

   iv. Fully tighten the Clamp Screws (D) with 5mm hex key (X).
   v. Proceed to Step 3.

   **NOTE:** Clamp Mounts cannot be used to mount the M8 to any vertical surface.

**SLIDING DESK MOUNT**

1D. For installation on work surface with no access for clamp system:
   i. Drill 1/2" hole through work surface in desired location.
   ii. Position the M8 Base over the work surface hole (H). If the hole is 2" (51mm) or more, cables can be routed through the hole. For some 2" grommet holes, cables should be routed before installation of mount to accommodate cable plugs (cable access is approximately 1.5" x 0.25" with 2" grommets).
   iii. Align Bolt-Through Plate, foam side up, with the rear edge of the unit. The Bolt-Through Mount can accommodate 75mm or 100mm hole patterns. For this, you may also use screws that came with your monitor.
   iv. Proceed to Step 3.

**STEP 2: SMART STOP ADJUSTMENT**

Position the smart stop ring to limit the arm’s range of motion. The marked angle will be in the center of the range of motion. The stop rings must be configured in such a way that the dynamic link head does not pass behind the near-edge of the unit.

**STEP 3: ATTACH ARM TO BASE STEM**

**BOLT-THROUGH MOUNT**

1D. For installation on work surface with no access for clamp system:
   i. Drill 1/2" hole through work surface in desired location.
   ii. Insert the angled link into the mount until release button locks in place.
   iii. If using Vertical Crossbar (A) to Crossbar Link (B) using Crossbar Link Screws (C), tighten with 4mm hex key until secure.

   **NOTE:** Before adding each link, adjust the smart stop according to step 2. If using a 2 link configuration, one of the links must be a 4" link. The link installation order may need to be swapped so as to comply with step 2.

   iv. Proceed to Step 3.

**STEP 4: ATTACH VESA BRACKET TO MONITOR**

A. Remove the plastic top cover.
B. Place VESA bracket in position on back of monitor with two cutouts (S) in vertical direction and attach using 4 screws provided. VESA bracket can accommodate 75mm or 100mm hole patterns. For this, you may also use screws that came with your monitor.
C. If mounting space for 75mm VESA bracket is inset into back of monitor, place the 4 plastic spacers (S) between VESA bracket and monitor (align with cutouts (U) in vertical direction), and using the extended VESA screws (Y), attach through the spacers.
D. Reinstall the plastic top cover.

**STEP 5: ATTACH CROSSBAR TO ARM**

A. If using Crossbar for dual-monitor application, follow Step 5 below. Otherwise, proceed to Step 6.

   i. Attach Crossbar (A) to Crossbar Link (B) using Crossbar Link Screws (C). Tighten with 4mm hex key until secure.

   **NOTE:** Monitor mounts may have to be re-adjusted after attaching the monitors.

**STEP 6: ATTACH CROSSBAR HANDLE**

A. Attach Handle (H) to Vertical Crossbar by using link screws (B). Adjust the handle to desired height. Tighten with 4mm hex key until secure.

**STEP 7: ATTACH VERTICAL CROSSBAR TO ARM**

A. Attach Handle (H) to Vertical Crossbar by using link screws (B). Adjust the handle to desired height. Tighten with 4mm hex key until secure.

**STEP 8: ATTACH VERTICAL CROSSBAR HANDLE**

A. Attach Handle (H) to Vertical Crossbar by using link screws (B). Adjust the handle to desired height. Tighten with 4mm hex key until secure.

**STEP 9: ATTACH MONITOR TO ARM**

Tilt the monitor back and lower into the arm, so that the hook fits into the corresponding hole on the VESA bracket. Then rotate the bottom of the monitor back towards the arm until the tab snaps in place. To remove, lift the release tab and pull the bottom of the monitor away from the arm, then lift free of the hook.

**STEP 9B: ONLY FOR OPTIONAL OFFSET VESA ADAPTER**

Attach Offset VESA Adapter to the display using the included screws. The Offset VESA Adapter can be placed on the arm in 4 positions to place the display in the desired location.
