WEIGHT ADJUSTMENT

Your monitor should move up and down smoothly and should stay in place once adjusted. If it is difficult to adjust or moves without assistance, it is not properly counterbalanced. Monitor should not exceed 20 lbs.

1. Use Hex Key C to loosen the two side screws (C) on the dynamic arm's base. Then use Hex Key B to loosen the two top screws (B) on the dynamic arm.

2. Tighten the two side screws (C) to achieve the force needed to hold the monitor weight. After tightening the side screws to the desired amount, tighten the two top screws (B) firmly to hold the adjustment.

Note: Do not over-tighten the screws as it can damage the screw threads.

3. Move the monitor arm to ensure that movement is smooth and the arm functions as desired. If required, repeat steps 1 and 2 in order to adjust the force as needed.

M2 Installation Instructions
**STEP 2: ATTACH ARM TO BASE STEM**

a. Insert M2 Arm (A) into the Base Stem (B).

b. Remove Cable Clip (C) located on Base Stem and using Hex Key B tighten the Base Stem Screw (D) to fully secure Arm to Base. Replace Cable Clip once Arm is secure.

c. Tighten Brackets to the Base Stem with 2 Loosening Screws (E).

**STEP 3: ATTACH VESA BRACKET TO MONITOR**

a. Place VESA Bracket in position on back of monitor with up toward top of monitor and attach using 4 screws provided. VESA Bracket can accommodate 75mm or 100mm hole patterns. For this, you may also use screws that came with your monitor.

b. Route power and monitor cables through the cable clips on the M2's upper link (A).

c. Slide the plastic cover on the lower link downward until it engages, then remove bracket (B).

d. Route cables inside the lower link (C).

e. Slide the plastic cover back onto the lower link and slide upward until it clips into place (D).

**STEP 4: ATTACH MONITOR TO ARM**

a. Slide VESA Bracket (A) into clip until it clicks.

b. To remove, depress Quick-Release Tab (B) and slide monitor up and away from arm.

c. If security is required, tighten Security Screw (C) using Hex Key A.
