Your monitor should move up and down easily and stay in position. If the monitor moves down from the desired position, or is hard to lift, you should increase the counterbalance force. If the monitor moves up from the desired position you should decrease the counterbalance force.

**M2.1 AND M8.1 ADJUSTMENT**
1. Push the Upper Link (A) down until the Adjustment Screw (B) is visible.
2. Using the appropriate hex key (4 mm for M2.1, 5 mm for M8.1) turn the Adjustment Screw clockwise to increase force, or counter-clockwise (towards –) to decrease force. Turn the Adjustment Screw (B) until the monitor is balanced.
3. Move the monitor around to ensure that the motion is smooth and the arm holds the monitor in place.

**M10 ADJUSTMENT**
1. To access the Adjustment Screw (F), use your finger to pry open the Cover (E) on the Upper Link (D).
2. Using the 5 mm hex key, turn the Adjustment Screw (F) clockwise to increase force, or counter-clockwise to decrease force. Turn the Adjustment Screw until the monitor is properly balanced.
3. Move the monitor around to ensure that the motion is smooth and the arm holds the monitor in place.
4. Reposition the Cover (E) and press until it snaps in place.

**NOTE**: When installing several of the same monitors, note the position of the needle in the Indicator (C) on top of the arm. Adjust the other arms to match.

Monitors Should Not Exceed:
- 15.5 lbs (7 kg) for M2.1
- 28 lbs (12.7 kg) for M8.1
- 48 lbs (21.8 kg) for M10
Total Weight Not To Exceed 95 lbs (43 kg)

---

**STEP 10: WEIGHT ADJUSTMENTS**

Your M/Flex arrives ready for use, however it may become necessary to adjust the clamp.

1. Remove monitors and links from the Bracket.
2. Open the Lever (A) all the way.
3. Turn the Adjustment Screw (B) clockwise ¼ of a turn using the 3 mm hex key (C).
4. Test your adjustments by closing the Lever.

**CAUTION**: If the lever is difficult to close, or will not close fully, it is over-tightened. Turn the adjustment screw counter-clockwise slightly. Forcing it closed will damage the M/Flex.

---

**STEP 9: M/FLEX CLAMP ADJUSTMENTS**

Your M/Flex arrives ready for use, however it may become necessary to adjust the clamp.

1. Remove monitors and links from the Bracket.
2. Open the Lever (A) all the way.
3. Turn the Adjustment Screw (B) clockwise ¼ of a turn using the 3 mm hex key (C).
4. Test your adjustments by closing the Lever.

**CAUTION**: If the lever is difficult to close, or will not close fully, it is over-tightened. Turn the adjustment screw counter-clockwise slightly. Forcing it closed will damage the M/Flex.
STEP 1: ATTACH MOUNT TO WORK SURFACE

CAUTION: The following Desk Mounts cannot be used to mount M/Flex to any wall or vertical surface.

CLAMP MOUNT

1A. For installation on an open edge of a work surface:
   i. Slide the Clamp Mount (A) all the way against the edge of the work surface.
   ii. Using the 5 mm hex key (C), tighten the Clamp Screws (B).

1B. For installation on a work surface against a wall or panel:
   i. See step 1B – i to remove Clamp Bracket.
   ii. Position the Frame all the way against the edge of the work surface.

1C. For installation through a 3" (75 mm) grommet hole:

   ** The Bolt-Through Mount will accommodate holes and grommets up to 4" (102 mm) in diameter. Holes 2" or larger will allow cables to be routed through before installation of the mount.

1D. For installation with minimal clamp space:
   i. Remove Base Cover (H) by lifting it up and off.
   ii. Underneath the work surface, reinstall the Clamp Bracket to the Frame and tighten the Bracket Screws.
   iii. Underneath the work surface, reattach the Clamp Bracket to the Frame.
   iv. Using the 5 mm hex key, tighten the Clamp Screws (B).

BOLT-THROUGH MOUNT

1E. For installation on a work surface with no space for a clamp system:

   ** The Bolt-Through Mount will accommodate holes and grommets up to 4" (102 mm) in diameter. Holes 2" or larger will allow cables to be routed through before installation of the mount.

STEP 2: BRACKET ASSEMBLY AND CABLE CLIP

SINGLE AND DUAL MONITOR APPLICATIONS

1. With the Lever (A) open, position the Dual Bracket (B) at the desired height on the Post (C).

2. Close the Lever entirely.

3. If you are adding a second monitor, lift and remove the Cover (D).

TRIPLE MONITOR APPLICATIONS

1. Remove the two set screws (E) that retain the Bracket Cap (F). Lift Bracket Cap upwards to remove it.

2. Install the Extension Bracket (G) on top of the Dual Bracket. Insert Tabs (H) into the Pockets (I). Replace the Set Screws. Tighten screws until the Extension Bracket is secure and the screws are flush with the surface.

3. Insert the Bracket Cap into the top of the Extension Bracket. Press down until it clicks into place.

STEP 3: SMART STOP ADJUSTMENT

A Smart Stop Ring is included at every Quick Attach joint. Position the Smart Stop Ring to limit the arm’s range of motion. The marked angle will be in the center of the range of motion.

NOTE: The stop rings must be configured in such a way that does not allow the monitor to pass behind the rear edge of the unit.

NOTE: If needed, adjust the Tension Screw (A) to hold the monitor in position.

STEP 4: ATTACH ARMS TO BRACKET

Before adding each link, adjust the Smart Stop according to Step 3. In a triple link configuration, one must be a 4" link.

1. Insert the first link into the mount until the release button (B) locks in place.

2. Insert the next link into the first link.

3. To remove a link, press the release button and lift upward near the joint.

NOTE: The installation order of the links must not allow the monitor to pass behind the rear edge of the unit.

STEP 5: ATTACH VESA PLATE TO MONITOR

1. Separate the VESA cover from the VESA plate.

2. Position the VESA plate over the mounting holes on the back of monitor with the D-shaped cutouts (A) in a vertical orientation. Attach using provided VESA screws.

3. Snap the VESA cover back in place.

STEP 6: ATTACH MONITOR TO ARM

1. Hold the monitor at an angle and lower it onto the arm. Fit the hook at the top of the arm into the D-shaped cutout in the VESA plate.

2. Push the bottom of the monitor back until the Quick Release Tab (B) on the arm snaps into position.

3. To remove the monitor, lift the Quick Release Tab and pull the bottom of the monitor away from the arm, then lift free of the hook.

NOTE: If needed, adjust the Tension Screw (A) to hold the monitor in position.

1C. For installation through a 3" (75 mm) grommet hole:*

   * If the diameter of the grommet hole is less than 3" (75 mm), a Bolt-Through Mount is required.

NOTE: The installation order of the links must not allow the monitor to pass behind the rear edge of the unit.
